Nationwide
Retirement Solutions
a Nationwide Financial company

Managing your account has never been easier

You now can track your deferred compensation account through personal-finance software on your computer. Nationwide Retirement Solutions introduced new download capability for participants who use MS Money® or Quicken® software.[1]

To use the downloadable data, you must:

- Have an active online User Account and Password. To activate your account online, click on the new user setup button on the right side of the Employee page, and follow the prompts. It takes just seconds!
- Have installed either MS Money or Quicken software on your personal computer.

From there, simply access your personal account. Then click on the Transaction History tab on the left navigation bar. You can view/download transaction information from the previous and current quarter's transactions through the previous business day. The data is updated daily, so you can manage your account any time, anywhere, any way!

Your account and personal information is safe online. Nationwide encodes every online transaction with the most powerful encryption tools available – the same tools used by the U.S. government.

If you would like personal assistance as you manage your deferred compensation account, contact a Nationwide Retirement Specialist. You can have Direct Access to a Nationwide Retirement Specialist by calling us Monday through Friday, 8 a.m. – 9 p.m. Eastern Time.

Our toll-free is 1-877-677-3678, option 1, then 2.
